EXPERIENCE

Meta

August 2025 - Present

Software Engineer

Menlo Park, CA

- Delivered **+0.1% topline metric** (50% team's target performance) by implementing feature on Instagram surface **serving 90M daily users**; Cut project backend capacity cost by **3×** via configurable **HTTP cache** with fallback behavior
- Developed new Instagram feature in **2x** expected time under AI-native framework with **Java, Kotlin, Compose, MVVM, GraphQL**; Delivered two production-ready experiment variants w/ unit tests and analytics, pending testing
- Delivered **+0.13% topline metric** through developing music feature; Delivered **+0.094% org topline metric** by upgrading contextual-music ML model with hash-based inference caching
- Diagnosed and resolved a team SEV3 by tracing engagement degradation to requests blocking a latency-sensitive path; Recovered Android bad-start metric by **0.1%** by deferring the work through a one-shot task
- Lead analytics auditing across Instagram features used by **hundreds of millions of users**, correcting **15+ inaccurate events** through coroutine debugging and session-scoped identifiers
- Migrated **9 MVC** components and **~5K LoC** from monolithic **Java/Kotlin** classes into isolated **MVVM** modules with regression-focused unit coverage, leveraging **AI as speed-multiplier**
- Recognized for contributing to org-wide production excellence; Served as **leading reviewer in a 120-engineer organization** and ranked in the **top three** for three weeks; Served in on-call rotation averaging **~50 tasks/ week**

Apple

June 2024 - August 2024

Software Engineering Intern

Cupertino, CA

- Reduced per-team workload by **4 hours daily** by automating failure triage process with large language models; selected to present project to **executive of Software Engineering** at Apple and deployed project for Xcode engineering teams
- Engineered fast and precise LLM failure summaries by developing an intelligent data-processing algorithm in **Python** that reduced LLM processing time by **95%** and creating a **Quadrant database** and schema for **retrieval-augmented generation**
- Implemented **microservice architecture** to integrate LLM processing into existing **CI/CD** infrastructure by writing **Jenkins** pipelines in **Groovy**, developing **REST APIs** and **ORMs in Swift**, and updating services with **webhooks**

Apple

May 2023 - August 2023

Software Engineering Intern

Cupertino, CA

- Built updated version of internal application now used by engineering employees across Apple Tools & Frameworks and presented project to **Vice President in Software Engineering at Apple**
- Developed application backend in **Swift Vapor** and reduced application load time by **80%** by implementing parallel data retrieval and caching with **Fluent ORM**s on a **PostgreSQL** database
- Designed and programmed a revamped UI after iterating on feedback from cross-functional team managers and introduced various new features such as filtering, searching, live data submission, and dynamic data visualization

Tesla

May 2022 - August 2022

Software Engineering Intern

Reno, NV

- Wrote a state machine in **Go** to automate testing of the Tesla Wall Connector, which includes **Kafka** backend calls to distribute MAC addresses to units as well as hardware interactions with wifi modules and CAN transceivers
- Generated **\$200k+** savings in CAPEX and headcount by developing a **Go** algorithm to query, parse, and assess battery health metrics to eliminate redundant downstream equipment and tests
- Reduced production deployment from **an hour to five minutes** by automating firmware team's monitoring and deployment processes by writing a full-stack app with **Django** and a concurrent **Python** program to automatically trigger and parallelize **Jenkins** builds upon merged main-line code

SKILLS

Languages: Python, Swift, Java, Go, Javascript, C, SQL, Rust, Scheme, HTML, CSS, Typescript

Frameworks: Git, Linux, Django, Flask, Vapor, Docker, AWS CLI, jQuery, GraphQL, Jenkins, PostgreSQL, Kafka, gdb, pdb, gRPC, Pandas, Spring Boot, React Native, Kubernetes, Qdrant, Node

EDUCATION

University of California, Berkeley

B.A. Computer Science

May 2025

GPA: 3.5/4
